Subject : Initial test results of MILITEC

Dear Brad:

As a follow-up to our telephone conversation over the past several weeks, I am submitting this brief summary of SPECO's results of testing with your product

It should be noted that the testing being done is very demanding of the lubricant in ht gearbox. The gearbox being tested is a differential type planetary with an output speed of less than one RPM. This creates one of the worst combinations possible from a lubrication stand-point in that there is very heavy loads with very little velocity to help generate a lubricant film.

This transmission requires efficiency testing in two moods. The first test is a no-load "free running torque" to determine the amount of power required to turn the unit without a resistant load. The second test is dynamic efficiency of the transmission.

The units that have been prepared as follows:

- 1. Unit was assembled and tested using moly-grease only
- 2. Units were disassembled and parts coated with MILITEC
- 3. After parts were dry they were reassembled with grease and retested

⊕

UNIT	NO-LOAD (IN-OZ)		EFFICIENCY(%)	
	BEFORE	AFTER	BEFORE	AFTER
A8	72	30	56.4	59.2
A12	96	35	54.9	59.8
E12	80	37	56.8	59.6

We are expecting to be performing additional testing in October and I will keep you ☐ informed.

Sincerely,

Dear Ms. Employer:

Thank you for meeting with me on Tuesday to discuss the open position at your firm and my qualifications for the position. I was very impressed with the professionalism and dedication of each person I met at your firm.

I was pleased to see that my business experience at Nova Industries and my law school course work would enable me to make an immediate contribution to your firm. It was also amazing to learn that we had several mutual acquaintances from Florida State, yet we had not met before.
It is, indeed, a small world after all!

Thank you, again, for the interview. I look forward to hearing from you.

Sincerely,
