Title of paper

Chapter 1 *Introduction to Technical Writing*

Sheet 1

- 1. State the three factors that determining technical reports?
And state the relation between them?*
 - 2. Why is a document being written?*
 - 3. Enumerate the forms that are used to present any material.*
 - 4. Write some general tips that must be considered for successful technical writing.*
-

5. Abridge the following sentences

A- A factor of safety greater than 1.6 was calculated for resistance to sliding for the abutment wall.

E- After a thorough investigation was made, it was decided to make an exact estimate of the value of the property that was damaged.

G- Jackie was given a gift by her mother.

I- The reports had been completed by the students.

1. State the three factors that determining technical reports? And state the relation between them?

WHAT'S A TECHNICAL REPORT?

Technical Writing:

Give and Take,

Dialogue,

Follow-up and action

most often, it creates action; it causes the person at the other end to react or respond

Answer 1

1. State the three factors that determining technical reports? And state the relation between them?

There are three factors determining technical writing:

purpose,
audience,
and tone.

IF YOU
FAIL TO PLAN
YOU
PLAN TO FAIL
BENJAMIN FRANKLIN

The purpose of writing and the audience very often set the tone of a piece of writing.

Answer 1

1. State the three factors that determining technical reports? And state the relation between them?

If you are writing to someone above you in the hierarchy,

you are probably requesting or recommending action.

BUT

if it is someone below you,

you are directing action or instructing.

Answer 2

2. Why is a document being written?

A well-written technical document must define the objectives very specifically at the outset.

The writer must be very clear about: Why the document is being written

Is it being written to simply record a process and keep it for reference or,

is it a proposal or plan which one wants others to accept or,

is one trying to convince somebody that the proposed plan of action is undesirable or desirable.

REPORT
WRITING

Answer 3

3. Enumerate the forms that are used to present any material.

- **Points and Sub-points:** Presenting the relevant facts as easily accessible points and sub-points.
- **Tables:** Putting the facts you want your readers to compare and contrast in the form of a table.
- **Flow Charts:** If you want your audience to quickly compare the lengths of two processes you could present both in the form of two flow charts on the same page. This will make comparison and assessment easy for the readers.

Answer 4

4. Write some general tips that must be considered for successful technical writing.

- Be Specific and Avoid Clutter in Your Writing
- Write with an Active Voice
- Present Accurate Information and Be as Precise as Possible
- Use Different Verb Tenses for Different Expository Purposes
- Try Using Third-Person Pronouns
- Use Charts, Tables, and Graphs

Be Specific and Avoid Clutter in Your Writing

The secret of good writing is to strip every sentence to its cleanest components, Every word that serves no function, every long word that could be a short word, every passive construction that leaves the writer unsure of who is doing.

Technical writing is not literary writing, which serves a completely different purpose.

Short declarative sentences are the easiest to write and read, and they are usually clear.

Write with an Active Voice

An active voice is always preferable to a passive voice.

For Example:- Write "The researchers found a strong correlation between the dosage of the drug and its efficacy," instead of "A strong correlation between the dosage of the drug and its efficacy was found by the researchers."

Windows 10 includes many multimedia features

Many multimedia features are included by windows 10

➤ *Present Accurate Information and Be as Precise as Possible*

The author of a technical paper uses words to relay information about facts and events that have happened.

The author typically does **not** relay opinions ,except in the cases where an unexplained event or phenomenon has occurred. In this case, it is appropriate for the author to render an opinion.

It is important that the author make clear that he or she is offering an opinion and not a fact.

➤ *Use Different Verb Tenses for Different Expository Purposes*

As the writer is usually writing about events which have already happened the tense of a paper is mainly past tense. For example, “Smith (1994) found (not “finds”) that freshmen spend less time” . . . , or “The results were” (not “are”).

However, in some parts of the document, it may be appropriate to use the present or future tense.

When the author is covering facts that were, are, and forever shall be true, these facts may be presented in **the present tense**

The present tense can also be used when you are giving your own ideas , when presenting statements that are well accepted, or when describing your results.

The future tense are used if the author is writing about experiments or activities yet to come .

BUT

The present tense is easier to read
and understand than past &
future

Try Using Third-Person Pronouns

First-person The writers own point of view:- ضمائر المتكلم I Me We My

When I read smith's 1998 research, I understand how children learn.

Second-person Speak directly to the readers:-

You must study hard if you want to pass your exams.

Third-Person Refers to people other than you:-

smith's 1998 research contributes understanding how children learn ,

you your

- تجنب: ضمائر المتكلم (I, Me, We) لأنها تعبر عن وجهة نظر ذاتية.
- تجنب: ضمائر المخاطب (You, Your) التي تستخدم للتحدث المباشر مع القارئ.
- مثال صحيح: بدلاً من قول "أنا أفهم"، نكتب "تساهم الأبحاث في فهم...".

He She It

Answer 3

➤ *Use Charts, Tables, and Graphs*

Tables and charts are important components in technical papers. They convey a lot of information in the shortest time and in minimum space.

Label all charts, tables, and graphs sequentially, and give them titles.

Remember

If you are new to technical writing

following the six tips above will immediately improve your writing. in technical writing you write for the readers, not to satisfy your ego or to tell a story. So, don't be ambiguous and go straight to the point.

Answer 5

- A factor of safety greater than 1.6 was calculated for resistance to sliding for the abutment wall.

The safety factor of resistance sliding the abutment wall is greater than 1.6.

- After a thorough investigation was made, it was decided to make an exact estimate of the value of the property that was damaged.

After a thorough investigation, the value of the property damaged was decided.

- Jackie was given a gift by her mother.

Jackie gave her mother a gift.

- The reports had been completed by the students.

The students have finished the reports.

THANKS
